WESCO Net Announces New Continuous Data Protection Backup Solution

Grand Rapids, Michigan – December 31st, 2008

WESCO Net, a Grand Rapids, MI based provider of network technology solutions announces new and simplified tapeless backup and disaster recovery solutions.

This new solution, known as DataBP, utilizes state-of-the-art technologies including snapshots, near-instant virtualization, secure offsite replication and storage of backups, support for Microsoft SQL Server and Exchange, and bare-metal system recovery even to dissimilar hardware. According to WESCO Net, DataBP is a remarkable strategy for companies that need to get out from under the burden of tape-based backups. DataBP takes snapshot backups of data as often as every 15 minutes, and can recover a lost server, even if it has been physically destroyed, through virtualization technology in as little as 30 minutes.

"Auditors will love this backup solution," says Matt Sawtell, CISSP. "DataBP protects all of your data with robust FIPS-approved AES encryption, and can replicate all your backups to secure offsite storage."

About WESCO Net

Organized in 2002, WESCO Net is a full-service network technology solutions provider. They specialize in LAN/WAN design, implementation and management; network security; firewall management; IP telephony VOIP (voice-over-Internet protocol) solutions; records management; managed hosting solutions (facilities management), compliance and security audits (HIPAA/GLBA/SOX); high availability solutions; web site engineering, and hardware sales and support services. WESCO Net provides services to the education, retail, legal, medical, real estate, hospitality, and financial services industries as well as court systems and regional municipalities. Its financial services portfolio includes servicing over 100 credit unions across the country. Visit www.wesconet.com for more information.
