WESCO Net Announces Upgrades to DataBP

Grand Rapids, Michigan – August 25th, 2009

WESCO Net, a Grand Rapids, MI based provider of network technology solutions announces new improvements to DataBP, their backup and disaster recovery solution.

DataBP uses advanced technologies including snapshots, near-instant virtualization, secure offsite data replication and backup archiving, support for Microsoft SQL Server and Exchange, and bare-metal system recovery to provide a seamless recovery solution that meets regulatory and industry standard best practices for disaster recovery and business continuity. In addition, the latest generation of DataBP includes: additional offsite storage flexibility, site-to-site data replication, enhanced reporting and overall greater ease of management.

The benefit of additional offsite storage flexibility is that businesses, no matter what size or number of employees, have the flexibility to implement a solution that best fits their needs. According to WESCO Net, these new enhancements will save businesses time and money by making critical data backup and recovery easier to install and manage, resulting in lower overall TCO.

"We are always striving to improve our services and offer the best balance of features and performance versus value," says Matt Sawtell, CISSP. "With enhanced capabilities and greater ease of management, DataBP will still protect all of your data at a lower overall cost."

About WESCO Net

Organized in 2002, WESCO Net is a full-service network technology solutions provider. They specialize in LAN/WAN design, implementation and management; network security; firewall management; IP telephony VOIP (voice-over-Internet protocol) solutions; records management; managed hosting solutions (facilities management), compliance and security audits (HIPAA/GLBA/SOX); high availability solutions; web site engineering, and hardware sales and support services.
